

I am a Junior Backend Developer with experience in building modern applications using Spring Boot, AI/ML technologies (LangChain, RAG), and PostgreSQL. I specialize in developing secure, efficient systems and integrating Large Language Models (LLMs). With a solid foundation in testing and containerization, I am seeking a role where I can further grow my technical skills and contribute to innovative solutions within a collaborative team.

Technical Skills

- Languages: Java, Python, JavaScript, TypeScript, SQL
- Backend: Spring Boot, Spring Security, Spring Data JPA, JWT, REST APIs
- AI/ML: LangChain4j, LangChain (Python), RAG, Vector Embeddings
- Frontend: Angular 18, HTML/CSS, Responsive Design
- Data bases: PostgreSQL, MySQL, pgvector (vector search)
- DevOps/Tools: Docker, Docker Compose, Git, Maven, Cloudinary CDN
- Testing: JUnit 5, Mockito, Integration Testing (85% coverage)
- Other: Kanban, i18n, CORS

Experience

- | | | |
|--|---|-------------------|
| Associate Consultant | Netcompany
Warsaw, Poland | June 2026 – Now |
| <ul style="list-style-type: none">• Developed new features for an automated task auto-closing pipeline, from analysis of the requirement to delivery.• Investigated production incidents and identified their root causes, documenting the findings for the team.• Analysed several thousand data records to verify behaviour and confirm expected results.• Prepared technical documentation and tests for the delivered changes. | | |
| Intern Backend Developer | Paweł Weselak Pragmatyczne Programowanie
Warsaw, Poland | March – June 2025 |
| <ul style="list-style-type: none">• Developed a file ingestion pipeline utilizing LangChain.• Implemented a RAG (Retrieval-Augmented Generation) system using LangChain4j and Spring Boot.• Prepared technical documentation and managed application containerization.• Deployed solutions supporting data processing and retrieval based on LLMs. | | |

Projects

Todrawn — Interactive whiteboard SaaS with Scribe code-to-video

- Built **Scribe**, a code-to-video studio that turns pasted source code, text or a freehand sketch into a hand-drawn whiteboard animation.
- Wrote the **stroke engine** from scratch: a 97-glyph single-stroke handwriting font, a hand-rolled tokenizer with syntax colouring for JS/TS/Python/Java/C-like code, and auto-fitting layout with wrapping and pagination.
- Implemented deterministic in-browser **video export** — frame-by-frame **WebCodecs** H.264 encoding muxed to MP4, with a MediaRecorder WebM fallback (720p/1080p, 24/30 fps, 16:9 or 9:16).
- Designed an arc-length **pen timeline** shared by the live preview (2D canvas and a 3D Three.js pen scene) and the recorder, so the exported video matches the preview frame for frame.
- **Privacy by design**: code, text and video never leave the browser; the backend stores export metadata only and enforces the export quota (2 free exports, unlimited on Premium).

- Delivered the surrounding SaaS: **real-time collaborative canvas over WebSockets**, JSONB autosave with optimistic locking, tier limits enforced under row locks, **Stripe subscriptions** and a lifetime plan, JWT auth with e-mail OTP, admin panel and 5-language i18n.

Tech stack: Spring Boot 3.5 (Java 21), PostgreSQL + Flyway, Redis, Spring Security/JWT, Stripe, WebSockets, Next.js 16, React 19, TypeScript, Tailwind 4, react-konva, Zustand, Three.js, WebCodecs, Docker, Testcontainers

LlamaTalks — **AI Chatbot with RAG**

- Built a conversational AI application featuring **Retrieval-Augmented Generation (RAG)** functionality.
- Implemented **semantic document search** using pgvector, supporting over 1400 file formats.
- Integrated **Ollama** for local LLM inference with real-time response streaming.
- Designed persistent chat history with conversation management and message storage.
- **Containerized** a multi-service architecture (Spring Boot, PostgreSQL, Ollama).

Tech stack: Spring Boot 3.5, LangChain4j, pgvector, Reactor/Flux, Apache Tika, Docker Compose, Ollama

Cibaria — **Recipe Management Platform: *Live demo***

- Created a **full-stack web application** for recipes with advanced user management.
- Implemented secure **JWT authentication** with Role-Based Access Control (Administrator/User).
- Built a **responsive frontend in Angular** featuring bi-lingual support (English/Polish) and advanced filtering.
- Achieved over **85% test coverage** using JUnit and Mockito, including comprehensive integration tests.
- Integrated **Cloudinary CDN** for optimized image storage and delivery.
- Deployed the containerized application using **Docker Compose** with a PostgreSQL database.

Tech stack: Spring Boot 3.4, Spring Security, Angular 18, PostgreSQL, JPA/Hibernate, JWT, Docker, Cloudinary, JUnit, Mockito

Game backlog tacker: *Live demo*

- **Developing** a comprehensive application for tracking video game progress and managing personal libraries.
- **Implementing social features** allowing users to connect, send friend requests, and view peers' game collections.
- Designing a database schema to efficiently handle complex **user relationships** and shared activity feeds.
- Integrated external API (IGDB) for fetching game metadata.

Tech stack: Spring Boot 3.5, Spring Security, React PostgreSQL, JPA/Hibernate, JWT, Docker

Education

Bachelor – Computer Science | **Vistula University** | Warsaw Poland

2022 – 2026

I consent to the processing of my personal data for the purposes of the recruitment process in accordance with the Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data (GDPR).
